Air Train

Name:Air Train
Location: China

DESCRIPTION OF AIR TRAIN

Air train is a suspension monorail transportation system, especially suitable for medium and small cities. The track is above the train and supported by steel or cement columns in the air. The use of air train moves ground traffic into the air, and urban traffic problems can be alleviated without the need to expand existing road facilities in the city. It overcomes the disadvantages of other rail transit systems and has many outstanding characteristics in construction and operation.

TECHNICAL PARAMETERS OF AIR TRAIN

Length: 8500mm
Width: 2300mm
Height: 2600mm
Weight: 5100kg
