Typical Physical Properties

Processing Type :	Raw
Product Type :	Dried Fruit
Packaging :	25kg per bag or as buyer required

Typical Nutritional Analysis

The amount of trace elements per 100 grams of sunflower seed kernel

	Per 100g
Appearance :	long-circle kernels
Flavor :	typical,not bitter or rancid
Color :	White-gray
Purity :	99.99%
Count/ounce :	584
Broken kernels :	3.24%
Visible :	0
Foreign materials(incl.stones) :	0

Wonderful anthocyanins

Eat more carefree

Since sunflower seeds contain a certain amount of sugar, people with diabetes should eat as little as possible.

In addition, sunflower seeds contain a part of grease, a large amount of food into sunflower seeds not only makes human body heat greatly increased, and will make elevated blood fat. Some of these lipids will be converted to glucose through gluconeogenesis, raising blood sugar.

Natural maturity cracking

Good quality · Visible

Clean and free of impurities
Contain a variety of nutrients

Choose lustrous, full form (dark and dull color, dry may be placed for a long time), moth-free is good.

Falling in love with grain is all organic !

Pollution-free farm supply,natural organic nutrition.

The sunshine long

Low latitude plateau, full of sunshine.

Rainfall

Subtropical monsoon climate, adequate moisture.

Good soil

The soil is fertile and meets the nutritional needs of growth.

Temperature

The whole process of growth temperature is strictly controlled.

Wild quality

Fearless details

What you see is what you get

There is no bleaching

There is no preservatives

Refused to add

Reject faulty goods

Natural health

The unique geographical advantages give high quality: suitable temperature conditions and a long growing period for the growth of crops and the variety of grain, with sufficient riv-er water irrigation, no industrial pollution,

At the same time, the traditional farming technology is used to plant, fully retaining its nutritional composition and edible value.No chemical fertilizer, no pesticide spraying. From the field to your kitchen table, hand-picked and carefully selected.

The kernel is small, the kernel is full and full, the shell is thin, the kernel yield is high, accounting for about 65%~75%, the kernel oil content generally reaches 45%~60%, the pericarp is mostly black or gray stripe, suitable for oil pressing.

Sunflower seed kernel is rich in fat oil, which has a lot of linoleic acid, but also contains protein, sugar and other organic acids and carotene.

Warm prompt

Keep in a cool and dry place sealed, avoid high temperature and humidity.
