世界ストロー業界のリーダー

GLOBAL LEADER IN STRAW INDUSTRY

COMPANY INTRODUCTION

公司简介

Founded in 1994, SOTON is a limited liability company specialized in the development, production, and distribution of plastic drinking straws, located in Beiyuan Industrial Zone, Yiwu, China, has a total investment of USD 40 million. Soon has 40,000 m2 of full-closed clean GMP standard workshops and 200 sets of production lines with an annual output of 12,000 tons. The export volume occupies over 20% of China's total straw capacity, ranked first for more than ten years. Soton is presently the largest drinking straw manufacturer globally and the drafting unit for China National Standard of "Polypropylene Drinking Straw."

GMP标准体系下的清洁厂房生产线

CLEAN PRODUCTION LINE UNDER GMP STANDARD SYSTEM

The company's production plant is a fully enclosed clean plant designed and constructed under the "GMP" food standards. From raw materials to the final products' output, the entire production process is completed in a closed environment. The air is purified and filtered as well. Four sanitary protection doors are installed at the entrances and exits to prevent dust and insects from entering the workshop and ensure our products' safety and sanitation.

PLA Straw Production Workshop

Production Workshop

Production Workshop

Before entering the workshop, staff must strictly implement clean and sanitary disinfection procedures - change clothes and shoes, take off ornaments, wash and disinfect hands, and pass through the air shower. The entrances of all workshops are set up to separate personnel and material to avoid possible cross-infection. To protect the equipment, the equipment area and production area are divided.

PAPER STRAW
ペーパーストロー

The paper straws are safe, non-toxic, and free from any smell or odor because they are produced by food-grade paper and printed with soy-based ink. They are recyclable after use and good water resistance, bright colors, and beautiful appearance. Completely degraded can be achieved within 3 or 4 months after being discarded. The products meet the hygienic requirements of European and American countries for food-safe packaging.

PLA BIODEGRADABLE STRAW
分解できますストロー

INTRODUCTION

Polylactic acid (PLA) biodegradable straws is a new biodegradable straw made from Polylactic acid(PLA), which has advantages of energy-saving, emission reduction and environmentally friendly. A variety of designs have been developed for PLA straw. The appearance and performance are close to the traditional products made from Polypropylene. The product is of good glossiness and transparency with the advantages of safety, sanitation, environmentally friendly, and biodegradable. The shelf life is up to 12 months.

PLA Straw Production Workshop

Production Workshop

Production Workshop

Biodegradable PLA straw
The future direction of the straw industry

PRODUCT DESCRIPTION	
PRODUCT NAME	Polylactic Acid (PLA) Biodegradable Straw
RAW MATERIAL	Polylactic Acid (Extracted from Natural Crops)
COLOR	The original color is translucent or light white, can be specialized into various colors according to the demand
SHELF-LIFE	12 Months
TRANSPORTATION	Cannot be exposed to the sunlight or rain; Cannot be mixed with harmful and corrosive materials. The temperature of the environment during transportation should not exceed 40 degrees.
STORAGE	Stored in a ventilated and dry warehouse away from the ground and fire source. Avoid direct sunlight and not to be stacked in the open air. The temperature of the environment should not exceed 40 degrees.The suggestion of best storage conditions are under 75% humidity and temperature between 18℃ to 30℃.
THE PRINCIPLE OF PRODUCTS DEGRADATION	The pathways of product degradation: Simple Hydrolytic Degradation: Polylactic Acid molecular chains contain ester bonds, which can be easily broken into carboxylic acids and alcohols under the action of hydrogen ions. The acid produced in degradation may act as a catalyst in the degradation and lead to an autocatalytic effect. • Composting Degradation: The decomposition rate is faster under high temperature and high humidity (50-55 degrees, humidity is higher than 80-90%), • Degradation in Nature: Various microorganisms and enzymes can degrade Polylactic Acid in nature.

COLOR & TYPE OF PRODUCTS

The current main types of PLA straw can be divided into straight straw, flexible straw, spoon straw, pointed straw, individually wrapped straw, printed straw, artistic straw, etc. The natural color of PLA straw is creamy white. Of course, the colors can also be customized according to the requests of customers.

PP STRAW

Plastic straw has been on the market for more than 50 years. The plastic straw is easy to use, clean, and convenient. Since the plastic restriction is getting more common worldwide, the plastic straw is facing its crisis at the moment. However, if the plastic straw can be recycled properly, its pollution will be minimized and well-controlled. The cost of the plastic straw is much less than the biodegradable straw. Soton has over 25 years of production experience in the plastic straw industry, aims to produce the best products and top service.

BAG SERIES

The garbage bag is disposable daily necessities that can be seen everywhere in our lives. At present, the main materials of the garbage bag are PE or PLA. PE garbage bag is a traditional product, since it is not biodegradable after being used and discarded, customers are looking for the new material for the biodegradable garbage bag. With the increasing awareness of global environmental protection and garbage classification, PLA garbage bag is becoming more and more popular among environmentalists (countries). It is believed that in the future, the PLA garbage bag will gradually replace PE garbage bags.

CPLA CUTLERY

cPLA Cutlery is currently widely used to replace traditional plastic products. It is free of chemical additives and free of petroleum-based plastic, manufactured on a purely organic basis. The cPLA cutlery set is robust and unbreakable. Due to the shape, sustainable cPLA cutlery is more stable than most conventional reusable cutlery made of polystyrene. cPLA cutlery is suitable for cold, warm, and hot dishes up to 95°C, therefore ideal for catering, festivals, take away / to-go catering, and self-service. After use, under industrial composting conditions, it can be completely degraded into carbon dioxide and water within one year.

PRODUCT NAME	cPLA Cutlery
MATERIAL	cPLA（Biodegradable）
PRODUCT SPECIFICATION	6 Inch, 6.5 Inch, 7.5 Inch (Customized Design Available)
COLOR	All colors in Pantone
PACKAGE	Opp Bag, PLA Bag, Paper Box, Individually Wrapped
SHELF-LIFE	2 Years
TEMPERATURE	-10 - 100 C
CERTIFICATION	FDA, BPI, EU, LFGB, SGS
