32m Ferris Wheel

Name:32m Ferris Wheel
Location:ShaoXing,ZheJiang Province,China

DESCRIPTION OF 32M FERRIS WHEEL

Ferris wheels are the most spectacular large amusement equipment at home and abroad. As the landmark equipment of the amusement park, a Ferris wheel is an amusement machine rotating around the horizontal axis. The 32 meters Ferris wheel is a popular product designed and manufactured by us. The Ferris wheel contains a large rotating wheel with a diameter of about 29.3 meters and is mounted on two tall columns. From a distance, it looks like a huge colorful windmill rotating slowly with 20 hanging gondolas. The shape of the gondola is beautiful, like a crystal pearl mounted on the outer edge of the big wheel. Because of the slow speed (velocity 0.21m/s), passengers waiting to board on the platform can safely step on the cabin.
The 32 meters Ferris wheel is a great choice for amusement parks and theme parks. The proper height and great appearance of the Ferris wheel are attractive to tourists, including both children and adults.
